

CRESPEL & DEITERS

Passionate about wheat. Since 1858.

Press Release

Meet Crespel & Deiters at IFT First in Chicago, July 17–19, 2023!

Crespel & Deiters will be showcasing its high quality and sustainably produced wheat proteins, wheat starches, and application concepts at booth S0132

Ibbenbüren/Germany, July 2023 – At the IFT FIRST Annual Event and Expo, the Crespel & Deiters Group will showcase its broad portfolio of non-GMO wheat-based solutions that meet the growing global demand for high-quality foods with nutritional value.

A family-owned company established in 1858, the Crespel & Deiters Group is, in fact, one of the leading producers of wheat starches and wheat proteins in Europe and solutions associated with it.

The company owns the entire value chain—from raw materials, to the technological processing of high functional ingredients, to application and formulation expertise.

It is especially appropriate at IFT for the company to announce that its new U.S. subsidiary, Crespel & Deiters Food USA LP, is located in Chicago, Illinois where American food manufacturers can order high quality wheat-based solutions directly in the U.S.

“By specializing in wheat, we have built up a wealth of experience with time,” said Philipp Deiters, member of the Crespel & Deiters executive board.

“Our company’s mission is to maximize the use of renewable raw materials to create innovative solutions. This allows our customers to achieve more with less, all with the purpose of cooperating to conserve our planet’s resources.”

Crespel & Deiters’ plant-based solutions for meat alternatives include:

- Texturized wheat protein (Lory® Tex) combined with wheat-based binders (Lory® Bind) and wheat-based stabilizers (Lory® Stab)
- Technological and sensory benefits for plant-based alternatives
- Authentic meat-like texture
- High quality plant proteins
- Crispy coatings and breadings (Lory® Crumb)

Solutions for the baked goods Industry include:

- Range of specially modified starches (Lory® Starch) for optimal consistency and high functionality in baked goods due to their thickening and stabilizing properties. For example, Lory® Starch Elara is a resistant starch that can partly replace flour and increase the fiber content of bakery products.

CRESPEL & DEITERS

Passionate about wheat. Since 1858.

- Hydrolyzed (Lory® Protein) and extruded proteins (Lory® Tex Powder) increase the protein level of bakery products, making them a nutritionally-optimized plant-based alternative.

At IFT, come visit Crespels & Deiters Booth No. S0132 and learn about their high-quality wheat-based solutions for plant-based alternatives and bakery products!

About Crespel & Deiters Group:

The Crespel & Deiters Group is an owner-managed, globally active company and one of the leading producers of wheat starches and wheat proteins in Europe. The company has been producing at its headquarters in Ibbenbüren for 165 years, using state-of-the-art technologies, sustainable processes and great innovative strength. From the wheat-based raw materials Crespel & Deiters develops highly functional products and application-oriented solutions for customer-specific applications. They optimise the end products and create added value for customers in the food and non-food industries.

More than 400 employees work to achieve the company's goal of high quality, responsible treatment of nature, customer orientation and reliability. At Crespel & Deiters, sustainability begins with purchasing: Only European wheat is used, at least 75% of which comes from German cultivation. The regional proximity keeps the amount of transport routes and emissions as low as possible and strengthens the local agriculture.
